Problem Statement

► Problem Faced by Existing Systems

Most fitness applications follow a generalized approach and do not consider menstrual cycle phases, energy levels, symptoms, or recovery needs. This can lead to ineffective workouts, fatigue, and reduced motivation for women users.

► Goal of the Project

The goal of BloomBalance is to create a cycle-aware fitness application that provides personalized workout plans based on menstrual cycle phases, symptoms, energy levels, and fitness goals.

► Gap Between Existing and Proposed System

Existing systems lack women-centered personalization and adaptive workout planning. BloomBalance addresses this gap by adjusting workouts according to hormonal changes and user health inputs.

► Proposed Solution and Its Impact

BloomBalance combines cycle tracking, symptom monitoring, and adaptive workout generation to provide safer and more personalized fitness plans. The solution promotes healthier exercise habits, better recovery, improved consistency, and overall well-being.

BloomBalance vs. Existing Systems

	Existing Systems	BloomBalance
Approach	Generalized	Cycle-aware
Personalization	Lacks women-centered personalization	Provides personalized workout plans
Adaptive Planning	Lacks adaptive workout planning	Adjusts workouts according to hormonal changes
Impact	Ineffective workouts, fatigue, reduced motivation	Healthier habits, better recovery, improved consistency

Objectives of the Project

- ▶ To develop a cycle-aware fitness application that generates personalized workout plans based on menstrual cycle phases, symptoms, energy levels, and fitness goals.
- ▶ To adapt workout intensity, duration, and exercise recommendations according to the user's physical condition and recovery needs.
- ▶ To provide progress tracking features including workout history, streak monitoring, calorie estimation, and analytics visualization.
- ▶ To improve women's fitness consistency and overall wellness through personalized reminders, adaptive planning, and health-focused fitness management.

Cycle-Aware Fitness Application Objectives

System Architecture

Conclusion & Future Enhancements

Conclusion

- ▶ BloomBalance is a cycle-aware fitness application that provides personalized workout plans based on menstrual cycle phases, symptoms, energy levels, and fitness goals. The system improves workout adaptability, recovery, and user engagement through personalized recommendations, progress tracking, and reminders. The application promotes a healthier and more sustainable approach to fitness for women.

Future Enhancements

- ▶ AI-powered workout recommendations
- ▶ Nutrition and meal planning features
- ▶ Cloud sync and Firebase authentication
- ▶ Wearable device integration
- ▶ Advanced cycle prediction and analytics
- ▶ Community and social fitness features
- ▶ Virtual wellness assistant integration

Empowering users through comprehensive fitness and wellness features.

Holistic wellness platform
AI, nutrition, community
